Office Action Summary

Application No.

09/944,057

Applicant(s)

FREUND ET AL.

Examiner

KAMAL B. DIVECHA

Art Unit

2151

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 August 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-64 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-64 is/are rejected.
- 7) ☒ Claim(s) 49 and 50 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 08/30/2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☒ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

- i. It does not identify the mailing address of each inventor. A mailing address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The mailing address should include the ZIP Code designation.
- ii. It does not identify the city and either state or foreign country of residence of each inventor.

Claim Objections

1. Claims 49 and 50 are objected to because of the following informalities: a sentence “computer capable of respond to challenges” of claim 49 needs to be revised and the said “system of claim 49” in line 1 of claim 50 was intended to be “system of claim 45”. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 9, 20 and 38 are rejected under 35 U.S.C. 112, second paragraph, as there is insufficient antecedent basis for the limitations in the claims.

- Claim 9 recites the limitation “said step of blocking” and “said rules” in line 3 and line 5 and 6 respectively.

- Claim 20 recites the limitation “said blocking step” in line 5.
- Claim 38 recites the limitation “said step of redirecting” in line 11.

Double Patenting

4. A later patent claim is not patentably distinct from an earlier patent claim if the later claim is obvious over, or **anticipated by**, the earlier claim. In re Longi, 759 F.2d at 896, 225 USPQ at 651 (affirming a holding of obviousness-type double patenting because the claims at issue were obvious over claims in four prior art patents); In re Berg, 140 F.3d at 1437, 46 USPQ2d at 1223 (Fed. Cir. 1998)(affirming a holding of obviousness-type double patenting where a patent application claim to a genus is anticipated by a patent claim to a species within that genus). “ELI LILLY AND COMPANY v BARR LABORATORIES, INC., United States Court of Appeals for the Federal Circuit, ON PETITION FOR REHEARING EN BANC (DECIDED: May 30, 2001).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2151

5. Claims 8, 9, 10, 11, 12, 17, 18, 20, 32, 33, 34, 35, 38, 53, 54, 55 and 57 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 11, 12, 7, 6, 19, 21 and 1 of U.S. Patent No. 5,987,611.

6. Claim(s) 1, 6, 7, 11, 12, 19 and 21 of patent #5,987,611 contains every elements of claims 9, 18, 11, 33, 55, 12, 8 & 10, 32, 53, 20, 38, 54, 34, 35, 17 and 57 of the instant application and as such anticipate(s) claims 8-12, 17, 18, 20, 32-35, 38, 53-55 and 57 of the instant application.

- Claim 9 of the instant application corresponds to claim 1 of patent #5,987,611.
- Claims 17, 35, 57 of the instant application correspond to claim 21 of patent #5,987,611.
- Claim 34 of the instant application corresponds to claim 19 of patent #5,987,611.
- Claim 18 of the instant application corresponds to claim 6 of patent #5,987,611.
- Claims 11, 12, 33, 55 of the instant application correspond to claim 7 of patent #5,987,611.
- Claims 20, 38, 54 of the instant application correspond to claim 12 of patent #5,987,611.
- Claims 8, 10, 32, 53 of the instant application correspond to claim 11 of patent #5,987,611.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an

Art Unit: 2151

international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

8. Claims 1,3-6, 8, 11, 12, 17, 21, 45, 46, 47, 48-51, 55 and 57 are rejected under 35

U.S.C. 102(e) as being anticipated by Fuh et al (U.S. Patent No. 6,463,474 B1).

With respect to claim 1, Fuh et al discloses: In a system comprising one or more client computers connected to the Internet by client premises equipment serving a routing function for client computers (figure 3 item #306, item #210, item #216), a method for managing Internet access based on a specified access policy (see abstract), the method comprising: transmitting a challenge from said client premises equipment to each client computer (figure 4 item #403), for determining whether a given client computer is in compliance with said specified access policy; transmitting a response from at least one client computer back to said client premises equipment, for responding to said challenge that has been issued (figure 4 item #404); and blocking Internet access for any client computer that does not respond appropriately to said challenge (figure 7A block #707).

With respect to claim 3, Fuh et al further discloses the method as in claim 1, wherein a client computer that responds with a particular predefined code indicating non-compliance is blocked from Internet access (figure 7B step #726, #728, #730 and #738).

With respect to claim 4, Fuh et al further discloses the method as in claim 1, wherein a client computer that responds with a particular predefined code indicating compliance is permitted Internet access (figure 7A step #702, #704, #706 and #712).

With respect to claim 5, Fuh et al further discloses the method as in claim 1, further comprising: before receipt of a challenge, transmitting an initial message from a particular client

Art Unit: 2151

computer to the client premises equipment (figure 4 item #401 sent before #403), for requesting the client premises equipment to transmit a challenge to that particular client computer.

With respect to claim 6, Fuh et al further discloses the method as in claim 5, wherein said initial message comprises a client hello packet (read as a data or http packet or request: figure 4 item #401).

With respect to claim 8, Fuh et al further discloses the method as in claim 1, wherein said access policy specifies rules that govern Internet access by the client computers (column 5 line 67 to column 6 lines 1-5).

With respect to claim 11, Fuh et al further discloses the method as in claim 1, wherein said access policy specifies which applications (read as types of network traffic) are allowed Internet access (column 7 lines 56-58).

With respect to claim 12, Fuh further discloses the method as in claim 1, wherein said access policy (read as user profile) specifies applications (read as types of network traffic) that are allowed Internet access (column 7 lines 56-58).

With respect to claim 17, Fuh et al further discloses the method as in claim 1, wherein said access policy specifies Internet access activities that are permitted or restricted for applications or versions thereof (column 7 lines 56-60; column 5 lines 58-67 to column 6 lines 1-5).

With respect to claim 21, Fuh et al further discloses the method as in claim 1, wherein said challenge includes a request (read as login request) for a particular client computer to respond as to whether it is in compliance with said access policy (figure 4 login request 403 and response 404).

With respect to claim 22, Fuh et al further discloses the method as in claim 1, further comprising: redirecting a client computer that is not in compliance with said access policy to a sandbox server (read as network resource; column 4 lines 62-65); and informing such client computer that it is not in compliance with said access policy (figure 7B step # 730 and 736).

With respect to claim 45, Fuh et al discloses A system for regulating Internet access by client computers (see abstract) comprising: an access policy (read as access privileges) governing Internet access by said client computers (column 6 lines 1-5); client premises equipment serving a routing function (figure 3 item #210) for each client computer to be regulated and capable of issuing a challenge to each client computer (figure 4 a login arrow showed by 403), for determining whether a given client computer is in compliance with said access policy; one or more client computers which can connect to the Internet (column 3 lines 30-35) and at least one of which can respond to challenges issued by said client premises equipment (figure 4 login 403 and response 404); and an enforcement module for selectively blocking Internet access to the Internet to client computers not in compliance with said access policy (figure 4 block #400 and column 11 lines 30-33).

With respect to claim 46, Fuh et al further discloses the system as in claim 45, wherein said client premises equipment includes a router (figure 3 block #210).

With respect to claim 47, Fuh et al further discloses the system of claim 45, wherein said access policy is provided at each client computer to be regulated (figure 5A item #504 and 506 which are part of access policy for authentication).

With respect to claim 48, Fuh et al further discloses the system of claim 45, wherein said enforcement module is provided at said client premises equipment (figure 4 block #400 in block #210).

With respect to claim 49, Fuh et al further discloses the system of claim 45, wherein said at least one client computer capable of responding to challenges can respond (figure 4 item #404) with a particular predefined code indicating non-compliance (incorrect username and password) with said access policy is blocked from Internet access (figure 7B step #726, #728, #730 and #738).

With respect to claim 50, Fuh et al further discloses the system of claim 45, wherein a client computer that responds with a particular predefined code (figure 4 item #404) indicating compliance (correct username and password) with said access policy is permitted Internet access (figure 7A step #702, #704, #706 and #712).

9. Claim 51 is rejected under the same rationale as claim 5 (see above).
10. Claim 55 is rejected under the same rationale as claim 11 above.
11. With respect to claim 57, Fuh et al further discloses the system of claim 55, wherein said access policy specifies types of activities which applications are allowed to perform or restricted from performing (column 7 lines 55-58).
12. As per claim 9, Fuh et al does not explicitly teach the method as in claim 1, wherein said step of blocking Internet access includes: determining whether permitting Internet access for a given client computer would violate any of said rules, and if permitting such Internet access would violate any of said rules, denying Internet access for that client computer, however the limitations above are deemed to be inherent.

Claim Rejections - 35 USC § 103

13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

14. Claims 2, 7, 10, 13-16, 18-19, 20, 47, 52-54, 56, 58-60 are rejected under 35 U.S.C. 103(a) as being obvious over Fuh et al (U.S. Patent No. 6,463,474 B1).

Fuh et al discloses all the limitations of claims 1, 5 and 45 as set forth above.

As per claim 2, Fuh et al does not explicitly disclose the method as in claim 1, wherein a client computer that does not respond at all is blocked from the Internet access, BUT Fuh et al does provide a login page (figure 5A) to client (read as a challenge), wherein if a client does not respond or provide the login information, then the client would be blocked from accessing the network resources, therefore it would have been obvious to the one of ordinary skilled in the art to claim that when a client computer that does not respond at all would be blocked from

accessing the network resources because this would have created a secure communication system in a network preventing the resources from hackers and intruders.

As per claim 7, Fuh et al does not explicitly show the method as in claim 1, wherein said client premises equipment is capable of permitting Internet access by selected client computers and denying access to the other client computers, but Fuh et al does show plurality of users connected to the router (figure 2 item #208a, b and c and item #210) and routers performing the authentication functions wherein if a client fails to provide correct information to the router then a router would block the traffic (figure 7A block #707) to that particular client and when the client provides the correct information, it would be allowed to access the resources (figure 7A block #712).

As per claim 10, Fuh et al does not explicitly show the method as in claim 1, wherein said access policy includes rules that are enforced against selected ones of users, computers, and groups thereof, but it would have been obvious to the one of ordinary skilled in the art to enforce the rules in the access policy against selected ones of users, computers and groups in order to avoid any unnecessary incoming or outgoing traffic to the network.

As per claims 13-16, Fuh et al does not explicitly disclose: application are specified by executable name and version number, application are specified by digital signatures, digital signatures are computed using a cryptographic hash and wherein said cryptographic hash comprises a selected one of Secure Hash Algorithm (SHA-1) and MD5 cryptographic hashes, however it would have been obvious to the one of ordinary skill in the art to use the above

Art Unit: 2151

specified elements because it would have allowed a router to make a correct decision (block or permit) by comparing executable names and securely transfer the data to the destination.

As per claims 18 and 19, Fuh et al does not explicitly disclose access policy with rules are transmitted to client computers from a remote location and remote location comprising a centralized location for maintaining said access policy but Fuh et al does show a centralized location where access policy (authentication information and access privileges of users) would have been maintained (figure 3 block #218 and 220) and the link between the client and the centralized location from where the data would have been transferred (figure 3: the communication link 310).

As per claim 20, although Fuh et al does not explicitly teach the method as in claim 1, wherein said blocking step includes: determining, based on identification of a particular client computer or group thereof, a specific subset of rules filtered for that particular client computer or group thereof, but based on the disclosed material by Fuh et al in column 6 lines 1-9 (access privileges), column 8 lines 4-6 (applying appropriate user profile) and figure 7A (based on identification applying filtering mechanism), it would have been obvious to the one of ordinary skill in the art to put this disclosed material together for the benefit of the claimed limitation.

15. Claim 52 is rejected under the same rationale as claim 7 (see above).
16. Claim 53 is rejected under the same rationale as claim 10(see above).
17. Claim 54 is rejected under the same rationale as claim 20(see above).
18. Claim 55 is rejected under the same rationale as claim 11(see above).
19. Claim 56 is rejected under the same rationale as claim 13(see above).
20. Claim 58 is rejected under the same rationale as claim 14(see above).

Art Unit: 2151

21. Claim 59 is rejected under the same rationale as claim 15(see above).
22. Claim 60 is rejected under the same rationale as claim 16(see above).
23. Claims 22-25, 27-37, 39, 40 and 42-44 are rejected under 35 U.S.C. 103(a) as being obvious over Fuh et al (U.S. Patent No. 6,463,474 B1) in view of Logan et al (U.S. Patent No. 5,761,683).

Fuh et al discloses all the limitations of claim 1 as set forth above and informing client computer that is not in compliance with said access policy (figure 7B block #736).

As per claim 22, Fuh et al does not explicitly disclose the method as in claim 1, further comprising: redirecting a client computer that is not in compliance with said access policy to a sandbox server.

As per claim 23, Fuh et al does not explicitly disclose the method as in claim 22 further comprising: redirecting a client computer that is not in compliance with a particular access policy to a particular port on the sandbox server; and displaying particular error message pages on the sandbox server in response to communications on particular ports.

As per claim 24, Fuh does not explicitly disclose a method comprising redirecting a request for Internet access by any client computer that does not respond appropriately to said challenge to a sandbox server.

As per claim 25, Fuh does not explicitly disclose the method as in claim 24, further comprising displaying an error message on the sandbox server to any client computer that does not respond appropriately to said challenge.

As per claim 40, Fuh et al does not explicitly disclose the method as in claim 24, further comprising: redirecting a client computer that is not in compliance with a particular access policy, to a particular port on the sandbox server; and displaying error messages on the sandbox server in response to communications on particular ports.

Logan et al explicitly discloses a network based hypertext display system employing a supervisory computer interconnected with one or more information display units and one or more remote document servers. Logan et al further teaches redirection of a URL request to a remote server (column 19 lines 63-67) and returning appropriate error messages that are displayed to indicate to the user that the access did not succeed (column 7 lines 41-48). Also, when the traffic is redirected to the remote server, it would have been redirected to a particular port on the server that would have been configured to receive the incoming traffic.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of Logan et al as stated above with the method and apparatus that provide network access control of Fuh et al for redirecting a client computer to a server and displaying error messages because it would have avoided the network congestion at the router by handling error notification and correction at a separate system and improved the overall system efficiency.

24. Claim 26 is rejected under 35 U.S.C 103(a) as being obvious over Fuh et al (U.S. Patent No. 6,463,474 B1) in view of Logan et al (U.S. Patent No. 5,761,683) in further view of Shrader et al (U.S. Patent No. 6,026,440).

Fuh et al and Logan et al disclose all the limitation as in claims 25 and 24 above.

Art Unit: 2151

However, Fuh et al and Logan et al does not explicitly disclose the method as in claim 25, further comprising: after displaying error messages, permitting said client computer to elect to access the Internet.

Shrader et al explicitly discloses a web server account manager plug-in for monitoring resources. Shrader et al further teaches a server returning an error message (e.g. Unauthorized) to the browser and prompting the user for id and password (read as elect to access the Internet, column 4 lines 56-67).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of Shrader et al as stated above with the system and method of Fuh et al and Logan et al because it would have avoided the network congestion at the router and improved routers performance and would have improved the system efficiency by allowing clients to elect to access the Internet at another location.

25. As per Claim 27, Fuh et al teaches a client that responds with a particular predefined code indicating non-compliance (see above) and Logan et al teaches that a client request is redirected to a network resource (read as server, see above).

26. Claim 41 is rejected under the same rationale as claim 26 above.

27. Claim 28 is rejected under the same rationale as claim 4 (see above).

28. Claim 29 is rejected under the same rationale as claim 5 (see above).

29. Claim 30 is rejected under the same rationale as claim 6 (see above).

Art Unit: 2151

30. As per claim 31, Fuh et al discloses a router permitting Internet access by selected client computers (figure 2 and figure 7A) and Logan et al discloses redirecting client computers to a network resource (read as server: column 19 lines 63-65).

31. Claim 32 is rejected under the same rationale as claim 10 (see above).

32. Claim 33 is rejected under the same rationale as claim 11 (see above).

33. Claim 34 is rejected under the same rationale as claim 13 (see above).

34. Claim 35 is rejected under the same rationale as claim 17 (see above).

35. Claim 36 is rejected under the same rationale as claim 18 (see above).

36. Claim 37 is rejected under the same rationale as claim 19 (see above).

37. Claim 38 is rejected under the same rationale as claim 20 (see above).

38. Claim 39 is rejected under the same rationale as claim 21 (see above).

39. Claim 42 is rejected under the same rationale as claim 14 (see above).

40. Claim 43 is rejected under the same rationale as claim 15 (see above).

41. Claim 44 is rejected under the same rationale as claim 16 (see above).

42. Claim 61 is rejected under 35 U.S.C 103 (a) as being obvious over Fuh et al (U.S. Patent No. 6,463,474 B1) in view of Durst, Jr. et al (U.S. Patent No. 6,542,933 B1).

Fuh et al discloses all the limitation of claim 45 as set forth above.

However, Fuh et al does not explicitly disclose a sandbox server to which client computers that are not in compliance with said access policy are redirected.

Durst, Jr. et al explicitly disclose a system and method of using machine-readable or human-readable linkage codes for accessing networked data resources. He further teaches

Art Unit: 2151

redirecting a client computer from an information server to a content server (read as sandbox server, column 3 lines 19-21 and lines 65-67 and figure 2 block #60)

At the time of invention it would have been obvious to a person of ordinary skill in the art to incorporate Durst, Jr et al's teaching as stated above with the system and method of network access control of Fuh et al because it would have improved the routers performance by redirecting the unauthorized traffic to another server and would have also avoided network congestion at the router.

43. Claims 62-64 are rejected under 35 U.S.C 103 (a) as being obvious over Fuh et al (U.S. Patent No. 6,463,474 B1) in view of Durst, Jr. et al (U.S. Patent No. 6,542,933 B1) and in further view of Shrader et al (U.S. Patent No. 6,026,440).

Fuh et al and Durst, Jr. et al discloses all the limitation as in claims 61 and 45 as set forth above.

However, Fuh et al and Durst, Jr. et al does not disclose the following limitations:

As per claim 62, the system of claim 61 wherein said sandbox server informs non-compliant client computers that they are not in compliance with said access policy.

Shrader et al explicitly discloses a web server account manager plug-in for monitoring resources. Shrader further teaches as in claim 62, the clients are notified (read as inform) by returning error message such as unauthorized to the browser (column 4 lines 56-67 and figure 3).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of Shrader et al with the system and method of Fuh et al and

Art Unit: 2151

Durst, Jr. et al because it would have provided client computers to correct the network requests and authenticating again in order to access the Internet after being notified by a particular error.

44. As per claim 63, the client computers are allowed to elect to access the Internet (prompting a user for user id and password) after being informed that they are unauthorized (return error message) or they are not in compliance with access policy (column 4 lines 56-67).

45. As per claim 64, Durst, Jr. et al disclose the information server (read as enforcement module) redirecting the client computers to the content server to retrieve primary content file (column 3 lines 19-21) and Shrader et al teaches a server capable of displaying error messages (column 4 lines 56-66).
